Client Relations

Technical Skills

- - Collaborated closely with front-end developers to ensure alignment with the application framework.
- - Required a deep understanding of technological intricacies and effective teamwork.
- - Made significant contributions to delivering innovative web-based solutions that enhanced user experiences and achieved organizational objectives.

Chip 1 Exchange - Senior PHP Developer

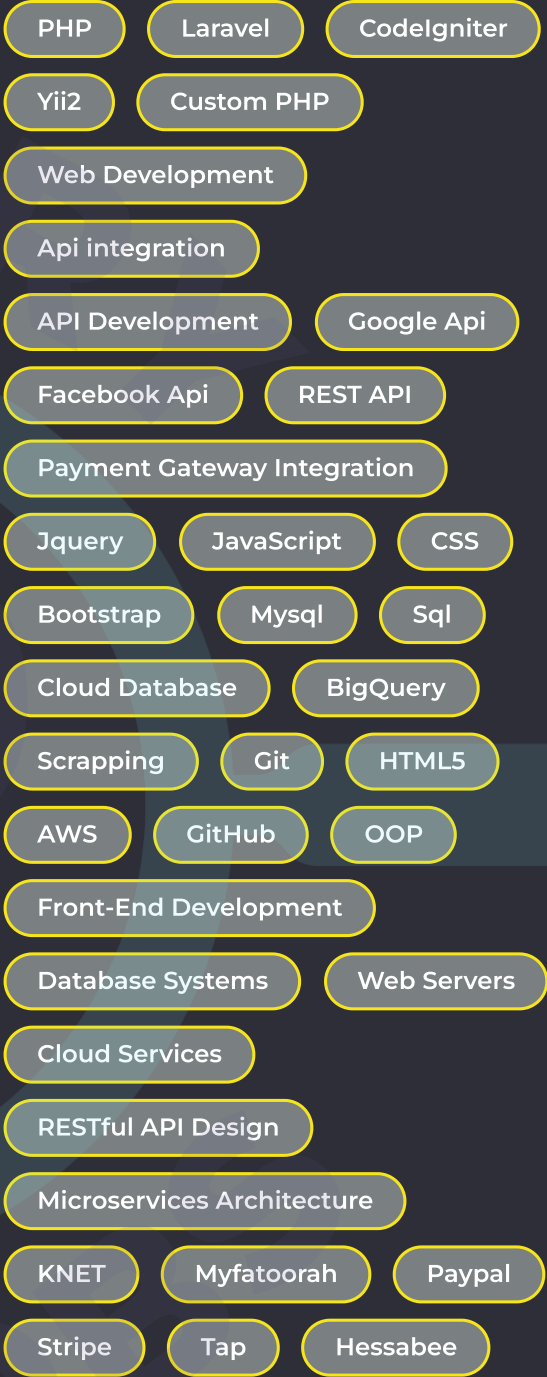

Jul 2019 - Jan 2021 | Lahore, Pakistan

- - Actively participated in the entire product lifecycle, overseeing the design, development, deployment, and maintenance.
- - Worked proficiently in the Yii2 framework, alongside other technologies.
- - Prioritized writing efficient and scalable code to accommodate increasing demand while maintaining optimal performance.
- - Notable accomplishment: Designed and developed software with the capacity to serve millions of daily users.
- - Demonstrated dedication to creating robust, high-impact solutions that catered to a large user base and contributed significantly to project success.

Crescent Technologies - Senior PHP Developer/Project Manager

Jan 2021 - Present | Lahore, Pakistan

- - Comprehensive project management responsibilities encompassing strategic planning, effective management, and vigilant supervision of software development projects.
- - Proficiently worked with technologies including Laravel, Yii2, CodeIgniter, Custom PHP, Yii2, and more.
- - Expertise extends to various domains, including E-commerce, Content Management Systems (CMS), Delivery management systems, and seamless collaboration with mobile developers.
- - Proficient in both API development and API integration, ensuring seamless connectivity and functionality across diverse systems.
- - Core competencies include resource allocation, meticulous time management, and adept management of stakeholder expectations, all geared towards ensuring the resounding success of each project.
- - Oversight of project teams, implementation of robust quality control systems, and close monitoring of project progress.

- - Consistent delivery of high-quality software solutions within predefined timelines and budgetary constraints.
- - Diverse project portfolio encompassing delivery management systems, multi-vendor e-commerce platforms, job portals, innovative betting systems, streamlined loan payment systems, ride-sharing solutions (similar to Uber), and sophisticated restaurant management systems.

Academic Projects

One Shop

- Oversaw the development of a crucial medical system project. August 2023 - Present
- Responsible for architecting and maintaining PHP components within the project.
- Played a critical role in ensuring the successful achievement of project goals and objectives.
- Collaborated effectively within a proficient team to drive project success.
- Demonstrated a steadfast commitment to excellence, resulting in the creation of meticulously high-quality code that strictly adhered to industry standards.
- Engaged in continuous self-improvement by constantly honing PHP programming skills.
- Remained highly attentive to the dynamic nuances of the medical system landscape.
- A persistent pursuit of quality contributed significantly to the project's success and fostered a culture of innovation and precision. One Shop is a versatile multi-vendor e-commerce platform available as both a mobile app and website.
- It features a powerful and user-friendly admin panel for seamless management.
- The platform brings together a wide array of sellers, offering a diverse range of products in one convenient marketplace.
- Shoppers can explore an extensive catalog of goods from various vendors, compare prices, and make secure purchases from a unified platform.
- For vendors, "One Shop" provides a seamless avenue to showcase their products to a broader audience, manage inventory, and efficiently process orders.
- The admin panel offers robust control over the entire ecosystem, enabling administrators to oversee vendor operations and monitor transactions.
- One Shop is designed to ensure a smooth shopping experience for users and is the go-to destination for both buyers and sellers seeking convenience, choice, and reliability in the world of e-commerce.

My Hassalah

- "My Hassalah" is an app and admin panel designed for managing group savings circles, commonly May 2023 - Present

known as Kameeti systems.

- Users can easily create or join savings circles, allowing them to contribute to collective savings efforts and interact with fellow members.
- Administrators have comprehensive control over various aspects, including circle creation, financial transactions, and member management.
- The platform serves as a valuable tool for collaborative savings and efficient financial management, benefiting both individual users and groups participating in Kameeti systems.

The Hungers

- Website: Serves as the digital face of restaurants, providing a user-friendly interface for customers to explore menus and place orders. March 2023 - Present
- Customer Application: Enhances the dining experience and offers convenience to patrons through a range of features.
- Driver Application: Streamlines the delivery process, enabling efficient dispatch and tracking of orders.
- Waiter Application: Empowers restaurant staff with tools to enhance customer service and streamline order management.
- Chef Application: Focuses on optimizing kitchen operations and ensuring smooth coordination in the culinary workflow.

Multi-Vendor Ecommerce

- Developed a multi-vendor e-commerce system using the CodeIgniter PHP framework. June 2022 - Present
- Point of Sale (POS) functionality.
- Branding options for vendors.
- Multi-vendor support.
- Commission system to manage revenue sharing.
- Generation of revenue reports for vendors.
- An online ordering website.
- Support for multiple payment gateways including PayPal, Stripe, KNET, and Myfatoorah.
- Vendor refunds directly to their bank accounts.
- Multi-theming for customization.
- Management of homepage content.
- Order tracking capabilities.
- Vendor payout system.
- Product variations and stock management.
- Payment and currency settings.
- Email configuration.
- System settings.
- Integration with delivery companies for shipping.
- Implementation of a REST API to facilitate mobile application integration.

Click House

November 2021 - Present

- Built on the CodeIgniter framework.
- A streamlined process for customers to purchase domains and set up multi-vendor e-commerce platforms.
- Integration with the GoDaddy API for domain selection.
- Customers can choose themes for their e-commerce stores.
- Easy provision of project setup information.
- Online payment processing for domain purchase and project setup.
- Rapid domain activation and automatic project setup, reducing setup time.
- Modules for managing themes, customers, staff, and a commission system.
- Efficient oversight and control over various aspects of the platform.

Delicon

October 2021- Present

- Seamlessly integrates all online orders.
- Offers the flexibility to connect with your existing courier services.
- Provides the option to choose from a roster of trusted couriers.
- Reduce order delivery failures.
- Monitor delivery performance efficiently.
- Accelerate the order delivery process.
- Vendor Panel: Empowers vendors with tools to manage their offerings.
- Admin Panel: Centralizes control over the platform's operations.
- Staff Panel: Enables staff members to efficiently handle various tasks.
- User Panel: Provides a user-friendly interface for customers to interact with the platform.
- Logistic Panel: Streamlines logistics and order management.
- Driver Application: Supports drivers in efficient order deliveries.
- User Application: Enhances the experience for end-users.

Customer Management System (CMS)

Jul 2018 - Jan 2019

- A versatile software solution for various offices to manage their daily records.
- Functionality to add customers with customizable fields or by importing CSV files.
- Comprehensive management of customer-related data, including jobs, invoices, estimates, payments, and leads.
- Integration with email services like Gmail and Google Drive.
- Displays the top 10 emails when integrated.
- Allows users to send replies or new messages through the system.

- File uploads are synchronized with Google Drive when integrated.
- A dedicated file management feature where users can upload or create new files for system use.
- Task functionality enables administrators to create and assign tasks to different users.

Pool Picks

- A platform where registered users create and manage pools for betting purposes March 2019 - May 2019
- Registered users can create and manage pools.
- Invite other users to participate in betting pools.
- View their past and current pools with various styles.
- Participate in contests created by administrators.
- Payment processing through Stripe.
- Admin can manage users, staff, and other administrators.
- Admin has the authority to announce winners.
- Create contests for front-end users to participate in.
- Handle pool management and winner announcements.
- Facilitate payment deductions from other pool members' cards and transfer winnings to the winning party.

Uk Auctioneers

- A platform designed for people in the UK to post items for auction. January 2019- March 2019
- Other users can bid on the listed items.
- Users can post items for auction on the platform.
- Interested parties place bids on the listed items.
- Payment for winning bids is processed through Stripe, a secure payment gateway.
- Funds from successful bids are transferred to the main client, the seller of the item.

Data Append

- Allows users to upload CSV files for data processing and enrichment. Jul 2018 - Jan 2019
- Parsed data is provided back to the user after CSV file upload.
- Users can retrieve specific records in a CSV file by selecting criteria like city, state, and zip.
- Users can select specific data fields (e.g., email, phone) and filter data by state, city, and zip.
- Real-time display of expected data count and pricing.
- Provides advanced filters for refining data selection.
- Data is fetched from Google BigQuery based on user selections.
- After payment submission, users are provided with a download button to retrieve the CSV file.

SLS Tools

August 2018 - Jan 2019

- A support project for the FAA (Federal Aviation Administration) designed to manage daily work and task assignments for employees.
- All employee data is entered into the system for tracking and management.
- Admin assigns daily tasks to employees.
- More than 7 modules such as ATS, COTS, DMS, etc.
- Each module corresponds to a respective department or area of work.
- The administration has the authority to view and modify data in any module.

OEMS

July 2019 - November 2019

- Designed for buying and selling chips.
- Two primary user roles: Admin and Simple Users.
- View, add, or edit products, categories, subcategories, and more.
- Register on the site.
- Add or upload their stock into the system.
- Purchase products listed by other users.

Chip1 CRM

November 2019 - Jun 2020

- Developed for internal company use.
- Manages various aspects including suppliers, warehouses, accounts, and product control.
- Efficiently manage the procurement of chips from suppliers.
- Provide chips to customers such as Intel, Apple, Dell, etc.

CareHalo

May 2017 - May 2018

- Developed and implemented Allergy Tech, a comprehensive healthcare management software.
- Streamlined patient health condition management by conducting tests and generating prescriptions based on test results.
- Facilitated data collection through different questionnaires, enabling the software to compile chronic condition information for each patient.
- Enhanced patient care by automating email notifications at every step, ensuring patients, doctors, and medical assistants are well-informed about upcoming schedules and appointments.
- Empowered doctors to provide personalized recommendations and precautions based on patient data, improving the quality of healthcare.
- Contributed to the efficient coordination of healthcare processes, resulting in enhanced patient experience and medical assistance.

- Played a pivotal role in the development and implementation of a healthcare solution that prioritizes patient health and doctor-patient communication.
